

DOST-ITDI Launches TekNegoShow Special Edition

Earlier today, July 8, 2021, DOST-ITDI launched an online business talk show titled “TekNegoShow” Special Edition via the social media platforms Facebook and YouTube.

ITDI's Director, Dr. Annabelle V. Briones, led the launch. She was joined by Deputy Director for R&D, Dr. Christine Marie C. Montesa, and OIC for ATS, Dr. Zorayda V. Ang, in welcoming guests, industry partners, stakeholders, and media friends.

Industry partners, Manly Plastics, Inc. and Optiwhite, Inc., shared their experiences as technology adopters and their perception about ITDI technologies and services.

Also, supporters of today's launching ceremony and the new and previous industry partners were acknowledged and thanked for their efforts in making the event successful and for helping promote ITDI's works and finding its place in new and existing businesses in the country.

Today's featured facility was the Materials Development Laboratory or MATDEV, which offers services that employ additive manufacturing or 3D printing technologies. Succeeding episodes will feature five technologies via ITDI Facebook and YouTube channel every Thursday at 1:30 PM. These include abaca fiber reinforced composite; biodegradable plastics; nanoclay production; I-salt and gourmet salts; and the Modular Multi-Industry Innovation Center or MMIC.
